About This Game

GYROCUBE is a Virtual Reality and Mobile puzzle game, that invites everyone to participate in a global challenge; solve the cubes as fast as possible! The game is based on the traditional physical cube puzzles loved by many, that however has failed to inspire a strong and original digital experience - Until now!

Features

Contains the most popular cube configurations (2x2x2,3x3x3,4x4x4, and 5x5x5) - There's a cube for everyone! **Series Mode** is also available, that requires you to solve all 4 cubes as quickly as possible, in order to compete on the Series Mode Leaderboard.

Personal Statistics and Global Leaderboards! Show your friends that you are better and faster than them! Compete to be part of the Top 4 - and you'll let everyone world-wide see your time to beat.

The cubes can be customised in a variety of colours, such as traditional cube puzzle colour schemes, color blind mode, etc!

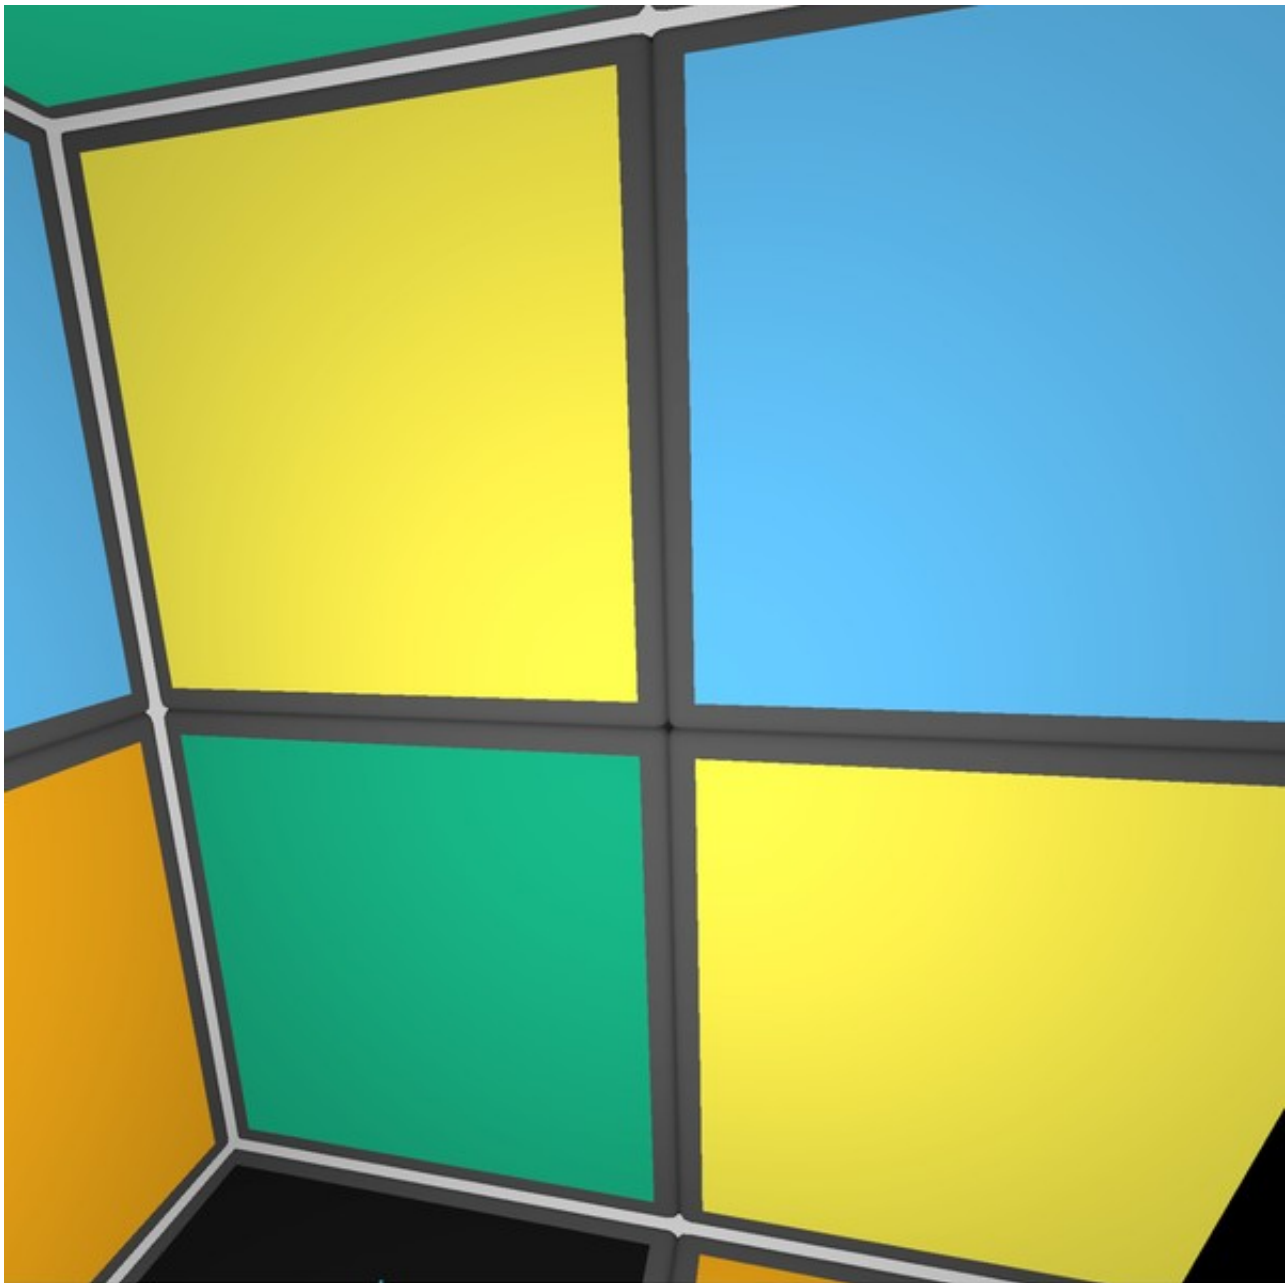

Community Driven Design

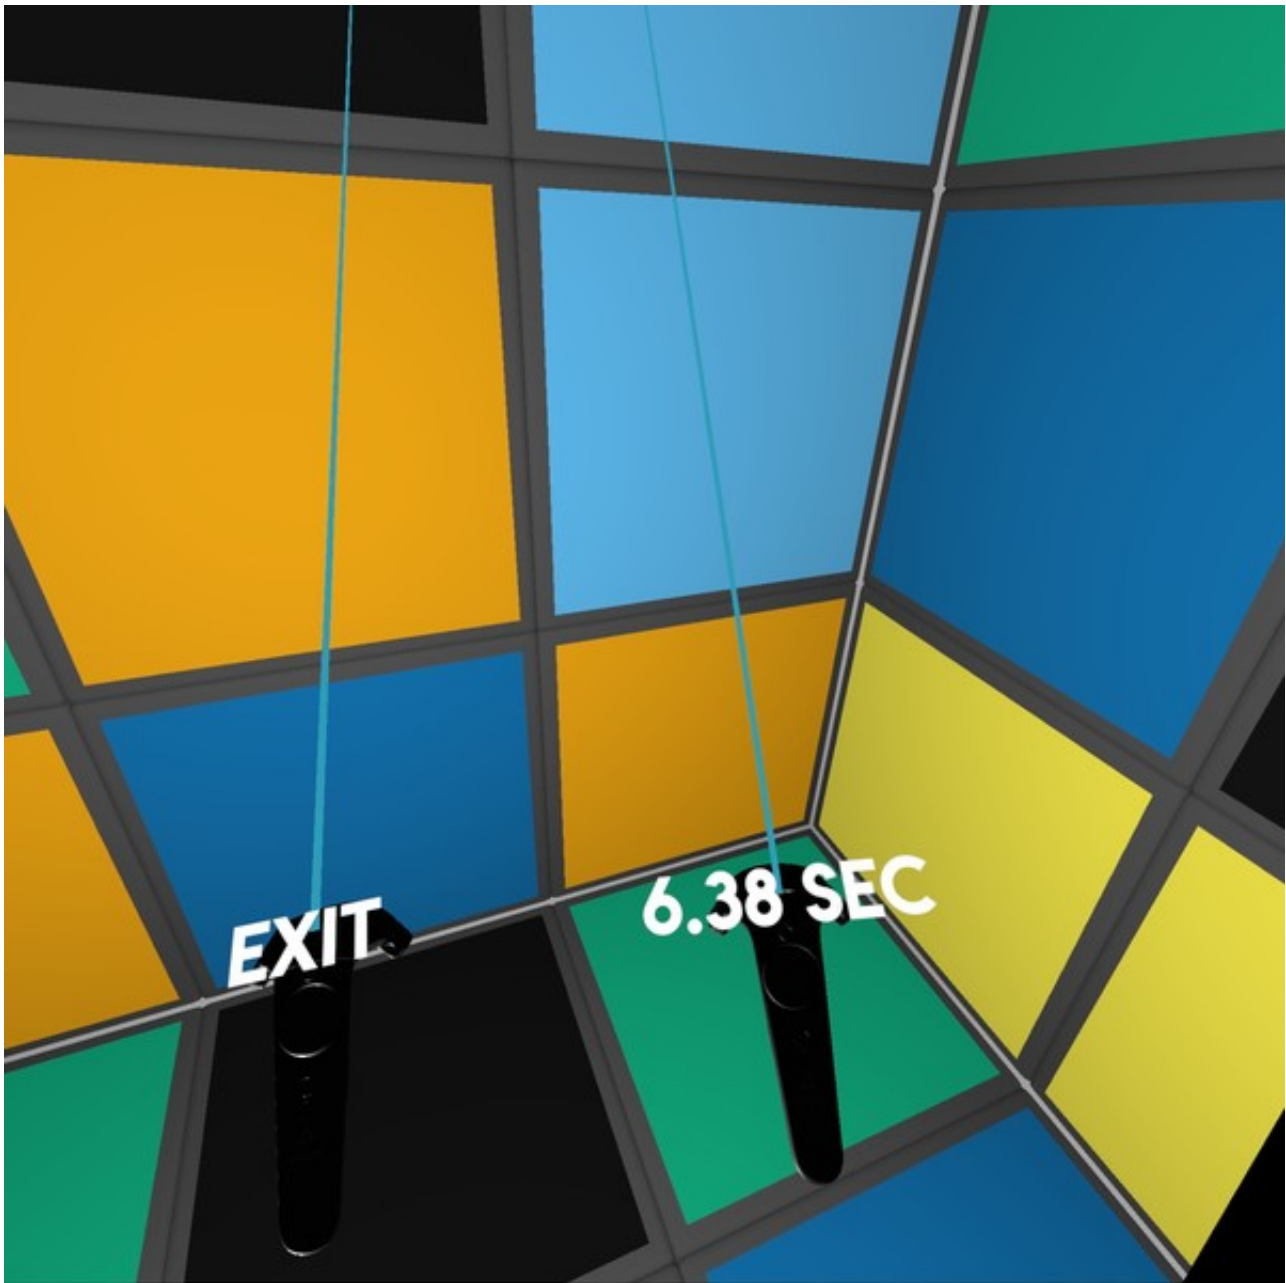

The entire design process has involved the Cubing community quite heavily. This has been through open feedback sessions, closed beta tests, and others. The entire project was driven by the cubing community and their excitement about the possibility to solve and interact with the cube puzzles in a new and fresh way, whilst also only requiring them to have access to their phone. The game invites everyone to try a couple of cubes for free, whilst providing them tools to see their progression as they become better, whilst also giving them a chance to have their name appear in everyone else's game on the leaderboard.

Title: GyroCube VR

PICK DIFFERENT
COLORS & CUBES

I absolutely love GyroCube VR!!! I've cubing for years, and it's such a cool feeling to finally do it in VR - and executed in such a cool way!

Also really appreciate that there's colorblind support, as it's really helpful for people like me.. I want this game to be good. I do. There are some issues I have with the game.

Firstly, I am not sure how well the game works on other devices but on the Oculus, the actual pointers for the remotes are too far up, and my remotes seem to be just fine.

Secondly, the way you spin the cube is WAY too finicky. If you could possibly have some way of holding the cube while trying to move your hands without spinning it, like integrating the triggers on remotes, that would be nice.

Although these issues are small, I would like to point out that this game costed **\$9.00. This is a great concept for a virtual reality puzzle game, but when two things that are essential to the gameplay are not working, I cannot in a truthful manner recommend this game.. If you are like me and you know how to solve a Rubik's Cube, this will be a hard buy enjoyable challenge, and it is fun to try and beat your best times. If you don't know how to solve a Rubik's Cube however, this will likely be very boring and not worth the money. It plays very well and is satisfying to solve.. If you like solving Rubik's cubes you'll like this! It is really challenging taking what you know from outside the cube to inside the cube! Not only that but it also shows you how the cube actually moves in a whole new way. Apart from a couple of minor bugs I reckon this is the perfect buy for any one who likes Rubiks Cubes and VR.**
